

New from  
WEBER

# Rounding Edges Laser Oxide Film Removal

The new WEBER planetary disc system solves the two biggest fabricating problems today!

1. The edges of your parts, no matter what the shape or material, are uniformly deburred and radiused.
2. Oxide scale is easily removed on the longitudinal, cross and contour edges in a single pass, on parts up to .350" in thickness!

WEBER systems are modular in design allowing this unique new feature to be combined with our other abrasive grinding and finishing processes to give you the greatest range of finishing and deburring available in a single machine!

*Visit us at the FABTECH Show, booth 12022
